

MANUFACTURING SOLUTIONS

Video Conferencing Solutions for manufacturers in the Aerospace industry

With tight product-development cycles, multinational workgroups and complex project management, the Aviation manufacturing industry has been recognised as one of the largest adopters of Video Communication Solutions.

Whether designing new engines, manufacturing composite wings for civil aircraft, or researching and developing new flight technologies, Video Conferencing Solutions have been implemented across this globalised industry to bring together the aerospace supply chain more effectively, more productively and more economically.

VideoCentric has been providing video conferencing and telepresence into the manufacturing industry for over 10 years. Initially approached as a way to reduce travel budgets, many customers now use their video solutions to join internationally dispersed teams, provide employee training more regularly and greatly improve relationships with suppliers, customers and clients.

VideoCentric's customers include:

- Boeing Defense UK
Cisco based Video Conferencing Solution & long-term support to join Seattle & UK locations
- Lucas Aerospace/TRW
Large conference & seminar room solutions with integrated audio systems
- Rolls Royce
Rollabout Video Conferencing systems for national & international collaboration

Benefits of Video Solutions for the Aerospace industry include:

- Reduction of multinational travel within a global industry
Travel has huge time and cost disadvantages, alongside being regularly attributed to stress & disruption of family time. Video Conferencing can hugely reduce the need to travel for recurring business meetings by up to 50%
- Increased efficiency & productivity
Time to decisions are greatly reduced, with immediate access to answers from around the world at any point in the development lifecycle. Video based solutions reduces unproductive audio conferencing meetings.
- Access to experts & specialists
Whether during research & development, or repairing current technology, video enables immediate access to experts & specialists, wherever they are located. With virtual face-to-face interaction regardless of location, specialists are able to cover larger territories; utilisation is improved & higher returns generated
- Collaboration for dispersed workgroups
Globally dispersed teams need the professional tools and technology to collaborate closely using voice, video and data. Wherever you are located, video enables engaging and personal communication, building trust and relationships between dispersed teams.
